Others...	Yes

DENTISTS SAY ABOUT SGLA

- Did my first case yesterday, picked a difficult case but it went perfectly!
- Placed 3 implants, went very well.
- I do not believe that at this time there is a method to improve accuracy beyond SGLA.
- Very excellent invention!
- Your solution is the simplest and most effective option what I have known. It is a brilliant idea to use the dental surveyor, dual axial protractor and line laser module to make this positioning device.
